

TEAM DECISION · 7 SEPTEMBER 2026

EVE × Shipaton

Rencana 22 hari untuk membuat EVE layak dinilai dan kompetitif di Next Gen Award.

Hard deadline

28 Sep · 21:00

Official cutoff

1 Oct · 14:45

THE DECISION

Kita punya **24 hari kalender**, tapi hanya **22 hari menuju deadline internal**

Rekomendasi: masuk lewat Next Gen, jalankan Plan A sekarang, dan pindah plan hanya ketika trigger tertulis terjadi.

Why Next Gen?

Student track menerima video dan source code tanpa store release.

Why deadline internal?

Public links, license, dan Devpost fields tetap bisa gagal walaupun app sudah selesai.

Why written triggers?

Scope berubah berdasarkan bukti, bukan rasa sibuk.

PRIZE AND FIELD

Hadiah nyata, kompetisi besar, lane Next Gen belum terukur

\$20k

Next Gen first place

3

cash prize slots: \$20k, \$10k, \$5k

23,817

all-category participants on Devpost

Why pursue it?

EVE already has a working Apple-native product, a clear audience, and a build story. The remaining work can target the rubric directly.

What we cannot claim

Next Gen entry count is unknown. The New York invitation does not include travel or accommodation for this category.

JUDGE MAP

Empat pertanyaan juri menentukan seluruh backlog

JUDGE ASKS	EVE ALREADY HAS	GAP	WHY NOW
Clear, useful, original?	Specific prospective-memory problem	User evidence and one-sentence pitch	Clarity comes before technical detail
Meaningful working progress?	Build succeeds; real product surfaces exist	Stable device journey	Code volume does not prove behavior
Thoughtful RevenueCat use?	No implementation yet	Purchase, entitlement, restore	Largest explicit rubric gap
Technical and product care?	On-device AI plus Apple context stack	Tradeoff evidence and polished story	Reasoning is EVE's differentiator

RevenueCat harus memperkuat nilai EVE

Free EVE

Satu adaptive routine, essential reminders, basic feedback, dan local privacy.

Why: manfaat aksesibilitas inti tetap berguna tanpa pembayaran.

EVE Plus

Multiple routines dan locations, deeper pattern insights, custom notification categories, history-based tuning.

Why: personalization dan ongoing value memberi dasar monetisasi yang masuk akal.

1 entitlement

eve_plus

1 offering

clear package choice

5 states

load, buy, cancel, restore, error

THREE PLANS

Scope turun ketika bukti gagal, bukan ketika tekanan naik

Plan A • Win-focused

Full EVE Plus, 12 user sessions, polished video, judge-friendly repo.

Stay if: RevenueCat works and core flow reaches 8/10 by 13 Sep.

Why: direct proof for every judging question.

Plan B • Focused

One premium capability, eight user sessions, same eligibility package.

Trigger: RevenueCat incomplete or flow below 8/10 on 13 Sep.

Why: stable depth beats unfinished breadth.

Plan C • Rescue

One EVE journey, smallest valid RevenueCat flow, public repo and video.

Trigger: no stable build or clean checkout by 21 Sep.

Why: eligible and judgeable comes first.

HARD GATES

Empat tanggal melindungi submission dari kerja telat

13 Sep

Plan A gate

Why: monetization risk harus terlihat saat masih ada waktu memangkas scope.

20 Sep

Feature freeze

Why: minggu terakhir milik reliability dan evidence.

25 Sep

Code freeze

Why: video dan clean checkout harus menunjuk commit yang sama.

28 Sep

Submit 21:00

Why: tersisa 65h45 untuk audit eksternal.

WEEKLY OUTCOMES

Setiap minggu berakhir dengan evidence

WEEK	OUTCOME	EXIT EVIDENCE	WHY
7-13 Sep	Eligibility and RevenueCat proof	Purchase recording, 5 interviews, 8/10 flow	Close the largest gap first
14-20 Sep	Reliability and user evidence	10/10 flow, tests, frozen scope	Stable build before submission work
21-27 Sep	Repo, video, screenshots, Devpost draft	Clean checkout, public video draft, signed checklist	Judges need inspectable artifacts
28 Sep-1 Oct	Submit and audit only	Timestamp, link checks, final commit hash	Late features create mismatch risk

Tiga outcome per hari, tidak ada "working on it"

01

Product

Apa yang berubah untuk user?

Why: backlog harus memperbaiki pengalaman yang dinilai.

02

Proof

Log, recording, test, atau link apa yang membuktikannya?

Why: klaim tanpa bukti tidak bisa diaudit.

03

Team

Keputusan atau handoff apa yang harus selesai?

Why: dependency yang diam menjadi keterlambatan.

PROPOSED OWNERSHIP

Satu accountable owner untuk setiap outcome

Dani

Scope + submission

Why: existing product surfaces and business framing.

Caca

AI reliability

Why: AI architecture, models, and technical report.

Nanda

RevenueCat + device

Why: project scaffold and permission infrastructure.

Amanda

Demo-path UI

Why: Home, onboarding, and learning-flow ownership.

Keiko

Research + visuals

Why: design and research map directly to product clarity.

Contribution tetap kolaboratif. Accountability memastikan setiap blocker punya satu next action.

DAILY STAND-UP

15
min

Usulan waktu: 18:30 WITA

Meeting berakhir dengan commit yang bisa dicek

2 min • Scoreboard

Why: semua orang melihat risiko yang sama.

5 min • Owner updates

Why: evidence dan blocker lebih berguna daripada activity.

5 min • Decisions

Why: keputusan tertunda menghambat beberapa orang.

3 min • Read-back

Why: deliverable, waktu, dan bukti tidak ambigu.

SCOREBOARD

Progress berarti angka atau artifact

METRIC	13 SEP	20 SEP	28 SEP	WHY
Core flow	8/10	10/10	10 consecutive	Demo reliability
User sessions	5	10	12	Evidence beyond team opinion
Critical bugs	≤ 5	0	0	One crash can erase judge understanding
Submission	20%	50%	100%	Assets progress with code
Independent audits	0	1 clean checkout	2 full reviews	Catch hidden permissions and stale links

RISKS

Risiko utama punya trigger dan response

RISK	TRIGGER	RESPONSE	WHY
RevenueCat slips	Not working by 13 Sep	Plan B, one premium gate	Protect criterion with less surface
Model unavailable	One rehearsal failure	Verified device and explicit fallback	Reduce uncontrolled demo state
Repo cannot build	Clean checkout fails 21 Sep	Plan C, setup becomes priority	Public source must be functional
Late feature request	No rubric and displaced task	Reject or explicit exchange	Time is fixed
Video above 1:55	Rough cut too long	Cut explanation first	Judges may stop at 2:00

Besok kita harus pulang dengan enam keputusan

01 Deadline dan plan gates

Why: fallback butuh authority sebelum krisis.

03 Ownership dan license

Why: public open-source repo wajib.

05 Demo device dan owner

Why: model dan permissions bergantung hardware.

02 Eligibility dan representative

Why: Next Gen student-only.

04 Free versus EVE Plus

Why: RevenueCat adalah gap terbesar.

06 18:30 stand-up dan board

Why: daily work harus terlihat dan terukur.

First checkpoint: RevenueCat working + 8/10 core flow by 13 September.
